

## CLAIMS

1. A mobile apparatus comprising:

a broadcast receiving function for receiving a television broadcast;

and

5 a telephone communication function for performing a telephone communication, wherein

an audio output device comprising audio output units of two systems, the audio output device outputting a television audio and a telephone-received audio, and

10 an audio processing circuit for outputting the television audio using one of the audio output units of the two systems and outputting the telephone-received audio using the other audio output unit when a telephone communication is performed while the television is continuously viewed / listened to, are provided.

15

2. A mobile apparatus as claimed in Claim 1, wherein

a setting means for setting which of the audio output units of the two systems is used for outputting the television audio and the telephone-received audio in the case of performing the telephone communication while  
20 continuously viewing / listening to the television, is provided.

3. A mobile apparatus as claimed in any one of Claims 1 and 2, wherein

a sound volume ratio control means for controlling a ratio of sound  
25 volumes of the audio output units of the two systems in the case of

performing the telephone communication while continuously viewing /  
listening to the television, is provided.

4. A mobile apparatus as claimed in Claim 3, wherein  
5 a setting means used by a user for setting the sound volume ratio is  
provided.

5. A mobile apparatus as claimed in any one of Claims 3 and 4,  
wherein  
10 the sound volume ratio control means controls the sound volume  
ratio so that the sound volume of the telephone-received audio is higher than  
the sound volume of the television audio.

6. A mobile apparatus as claimed in any one of Claims 1 to 5,  
15 wherein  
a display device for displaying a television image and a telephone-  
received image and a display control means for displaying both of the  
television image and the telephone-received image on the display device in  
the case of performing the telephone communication while continuously  
20 viewing / listening to the television, are provided.

7. A mobile apparatus as claimed in Claim 6, wherein  
the display control means window-displays one of the television  
image and the telephone-received image in a displayed image of the other.

8. A mobile apparatus as claimed in Claim 6, wherein  
the display control means divides a display screen into two regions  
and displays the television image in one of the divided display regions and  
the telephone-received image in the other region.

5

9. A mobile apparatus as claimed in any one of Claims 7 and 8,  
wherein  
a setting means used by the user for setting sizes and display  
positions of the television image and the telephone-received image displayed  
10 on the display device is provided.

10. A mobile apparatus as claimed in any one of Claims 1 to 9,  
wherein  
the audio output device is an earphone or a headphone.
